BlueBird Promises

Jobs Data Layer

Conclusion

Read Functionality

Safe Refactoring

Integration Tests

Jasmine No Before All

Clean with Promises

1. Before our tests we need to:
2. Connect to our database
3. Then Reset our jobs
4. Then save a job
5. Then Find all the jobs
6. Set the jobs
7. To test against them

```
before(function(done) {  
  jobsData.connectDB('mongodb://localhost/jobfinder')  
    .then(resetJobs)  
    .then(function() { return jobsData.saveJob(job) })  
    .then(jobsData.findJobs)  
    .then(function setJobs(collection) {  
      jobs = collection;  
      done();  
    });  
});  
})
```
